

Peer Evaluation Form for Group Work

Group number 2
 Your name raha golsorkhi on behalf of group 2

Write the name of each of your group members in a separate column. For each person, indicate the extent to which you agree with the statement on the left, using a scale of 1-4 (1=strongly disagree; 2=disagree; 3=agree; 4=strongly agree). Total numbers in each column.

Evaluation Criteria	Member: Nurjahan Ahmed Shiah	Member: Ege Yesliyurt	Member: Weiqin Situ	Member: Arshia Hassanpour	Member: Raha Golsorkhi	Member: Dawood Al-Janabi
Attends group meetings regularly and arrives on time.	4	4	4	4	4	4
Contributes meaningfully to group discussions.	4	4	4	4	4	4
Completes group assignments on time.	4	4	4	4	4	4
Prepares work in a quality manner.	4	4	4	4	4	4
Demonstrates a cooperative and supportive attitude.	4	4	4	4	4	4
Contributes significantly to the success of the project.	4	4	4	4	4	4
TOTALS	24	24	24	24	24	24

Feedback on team dynamics:

1. How effectively did your group work? (List at least 3 things)

Our group worked effectively during Iteration 3 because development was clearly aligned with advanced user stories such as analytics, history, rewards, and challenges, which required stronger integration across the system. For example, Arshia worked on User Story 3.3 (Analyze Training Trends), which depended directly on data from earlier features like workout completion (US 3.1). This shows that the team successfully built on previous iterations rather than starting from scratch.

Another strength was how different members contributed to interconnected ITR3 features. For instance, User Story 3.2 (Review Workout History) relied on completed workout data, while User Story 3.5 (Detect Missed Sessions) extended that logic to track consistency. These features required coordination between backend logic and frontend display, and the team managed to integrate them smoothly.

Additionally, the group worked effectively because members contributed to user engagement features in Big Story 4, such as User Story 4.3 (View Achievement Gallery) and User Story 4.4 (Weekly Challenges). These features required combining data from multiple parts of the system (points, streaks, history), showing that the team was able to handle more complex system-wide functionality in this iteration.

2. Were the behaviors of any of your team members particularly valuable or detrimental to the team? Explain. (List at least 3 things)

Several team members demonstrated valuable contributions during Iteration 3, especially in implementing more complex and integrated features. For example, Arshia Hassanpour's work on User Story 3.3 (Training Trends) was particularly valuable because it transformed raw workout data into meaningful insights such as total workouts, training time, and streaks. This added significant value to the dashboard and made the app more useful for users tracking progress. Weiqin Situ contributed to features related to program feedback and system improvements, which connect to User Story 2.4 (Review Aggregated Client Feedback) and later dashboard-related insights. This helped improve the quality and usefulness of trainer-facing features.

From my side, Raha Golsorkhi, I contributed to dashboard-related improvements and testing tied to features like User Story 3.4 (Progress Summary Dashboard) and earlier workout tracking. These contributions were important because they ensured that the final output of the system (what the user sees) was clear, accurate, and functional. Nurjahan Ahmed Shiah also added value by working on user interaction features and ensuring usability across the platform, especially in areas connected to browsing and scheduling, which indirectly support ITR3 features like history and engagement. There were no clearly detrimental behaviors from any team member. However, one challenge was that ITR3 features required heavy integration, so delays in one component (e.g., data not fully ready) could slow down others. This made coordination more important than in earlier iterations.

3. What did you learn about working in a group from this project that you will carry into your next group experience? (List at least 3 things)

One important lesson from Iteration 3 is that later-stage features depend heavily on earlier work being correct and complete. For example, features like User Story 3.2 (Workout History) and User Story 3.3 (Training Trends) only work properly if workout completion data is accurate. This showed me the importance of building reliable foundational features early.

I also learned that integration becomes much more complex in later iterations. Unlike earlier user stories that could be built independently, ITR3 features required combining multiple components such as backend APIs, frontend dashboards, and stored data. This means teams need stronger communication and coordination as the project progresses.

Another key takeaway is that user experience becomes more important in later stages. Features like User Story 4.3 (Achievement Gallery) and User Story 4.4 (Challenges) are not just about functionality, but also about engagement and motivation. This taught me that a successful system is not only technically correct, but also enjoyable and clear for users.

Finally, I learned that testing and validation are critical in integration-heavy features. When working with dashboards, analytics, and history, even small data inconsistencies can break multiple features. This reinforced the importance of thorough testing and continuous validation throughout development.
